

Launch status, and the one decision still open

Where the new site stands, what's fixed, what's still open,
and the two paths to getting it live on your domain.

Prepared 4 September 2026 For David & Gillian, Two Four Eight

Status Ready to launch, pending one decision

01 WHERE THINGS STAND

5 / 5 Pages built & content- complete	3 Launch snags fixed today	4 Snags still open	1 Decision needed to go live
--	---	------------------------------	---

02 FIXED THIS SESSION

- ✓ **Favicon & social preview**
Browser tab icon and link-preview tags added (title, description, share image) — a shared link now shows something instead of a blank card.
- ✓ **Privacy Policy & Terms of Use**
Footer links now open the PDFs you supplied, instead of going nowhere.
- ✓ **Repo cleanup**
Loose uncommitted changes tidied up so the project history is clean for handover.

03 STILL OPEN

Kasi story video

NIVEH — IN PROGRESS

Placeholder Vimeo embed is live in the "South Africa: since 2018" section, swapped in once the new upload finishes.

4 testimonial photos missing

TFE — SUPPLY PHOTOS

Sam, Ryan, Scott, Loyiso show name and quote only — the site degrades gracefully, but photos would finish the section.

Research report PDF is 46MB

TFE — SMALLER EXPORT

Heavy for a "free download" on mobile. Worth a compressed export if one exists.

Mobile menu accessibility nit

NIVEH — QUICK FIX

Minor: the hamburger button doesn't announce open/closed state to screen readers.

04 THE ONE DECISION LEFT

How the site actually goes live on twofoureight.org

OPTION A

Keep GitHub Pages, repoint DNS

Site stays where it's been built and reviewed. Two DNS records get added at Xneelo; everything else on that hosting account is untouched.

EFFORT

Low — a DNS edit, once

RISK

Low — mail records untouched

FUTURE UPDATES

Push to GitHub, live in ~4 min

WHO HOLDS WHAT

Code on GitHub, DNS at Xneelo

OPTION B

Upload straight to Xneelo hosting

Site files replace what's on the existing hosting account directly. No DNS change, but the current install there needs to be retired first.

EFFORT

Higher — see note below

RISK

Medium — live install to retire

FUTURE UPDATES

Manual re-upload each time

WHO HOLDS WHAT

Everything on Xneelo hosting

WORTH KNOWING **twofoureight.org** is currently running a live WordPress install on that Xneelo account, not an empty folder. Option B means properly retiring it first — moving its files aside, adjusting its routing rules, and deciding what happens to its database — not just dropping the new files in alongside it. Worth a backup regardless of which option you land on.

05 OWNERSHIP — WHAT NEEDS TO MOVE TO TFE

SYSTEM	CURRENTLY HELD BY	FOR FULL TFE OWNERSHIP
Site code (GitHub repo)	Niveh's GitHub account	Add a TFE-controlled GitHub account as owner or collaborator
twofoureight.org DNS	TFE's Xneelo account	Already TFE-owned — no transfer needed
Email (mail/smtp.twofoureight.org)	TFE's Xneelo account	Already TFE-owned — leave untouched by either option
Current WordPress site + database	TFE's Xneelo account	TFE decides retire vs. archive, only relevant under Option B
Site hosting (the new site itself)	Not yet live	Depends on which option is chosen

Next step

Waiting on Gillian's call between Option A and B. **No production changes have been made** beyond the three fixes above, which are committed to GitHub but not yet pushed live. Once a direction is picked, the DNS or hosting steps take one short session to walk through together.
